

## Rail Car Movers

# Rail Car Mover Rentals

In many situations using your own rail car mover can save your business time and money. You can reduce demurrage or detention charges by promptly moving your goods when and where you need to.

Using a rail car mover that can be driven on the road as well as on the tracks is more versatile than using a locomotive because you can easily drive them directly to the area of track where the cars that need to be switched are located. Railroad shippers have been using rail car movers extensively for years because of the convenience and value as compared to the expense of using the railroad operator for the switching.

We have three different Trackmobile rail car mover models in our fleet to suit your needs. The Viking is the most agile of the three with a smaller size and a tight outside clearance turning radius of 23'6". The Hercules is most popular for its capacity and floating axels. The Titan is designed for a more rugged environment with its 6-cylinder engine.

Model	Tractive Effort in Pounds (Single)	Tractive Effort in Pounds (Double)
Viking	27,000	42,700
Hercules	28,400	44,700
Titan	33,100	49,500

All of these models include:

<ul style="list-style-type: none"><li>•Automatic weight transfer system</li><li>•Neutral Braking System</li><li>•Programmed Throttle Control</li><li>•Automatic/Manual Power-Shift Transmission</li><li>•In-cab Train Air Controls</li></ul>	<ul style="list-style-type: none"><li>•Safe-T-Vue™ 360° Camera System</li><li>•On Board Diagnostics</li><li>•UltraView 7" Bright Color Display</li><li>•Air Ride, High-Back Swivel Seat</li><li>•Joystick and Armrest Controls</li></ul>
